

AQUAEDGE™

19XR Centrifugal Liquid Chiller

Cooling Capacity: 300~1650 RT (single-stage)

600~3000 RT (two-stage)

1000~6000 RT (series counter flow system)

Turn To The Experts

Carrier is a leading global provider of innovative HVAC, refrigeration, fire, security and building automation technologies.

Supported by the iconic Carrier name, the company's portfolio includes industry-leading brands such as Carrier, Kidde, Edwards, LenelS2 and Automated Logic.

Carrier's businesses enable modern life, delivering efficiency, safety, security, comfort, productivity and sustainability across a wide range of residential, commercial and industrial applications.

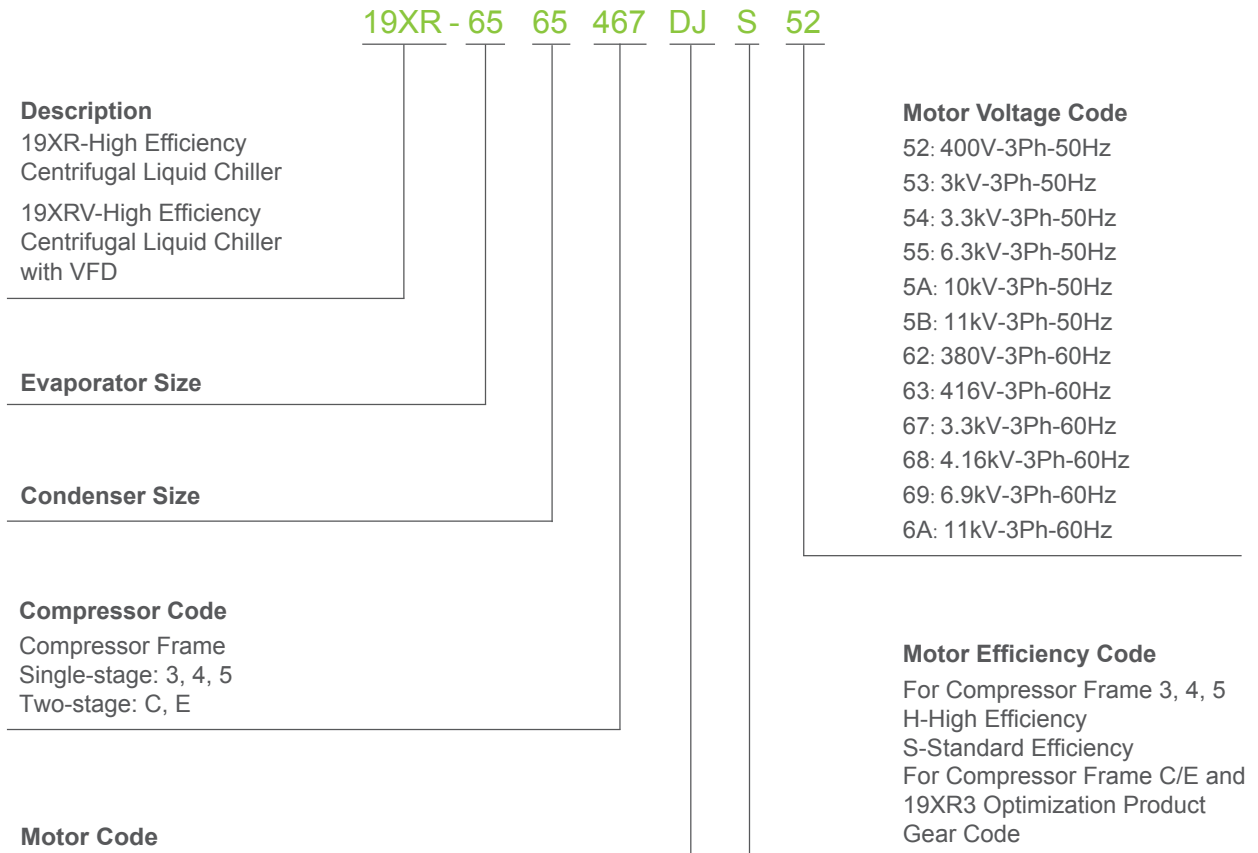

In 1998, Time magazine named Dr. Carrier one of its 20 most influential builders and titans of the 20th century.

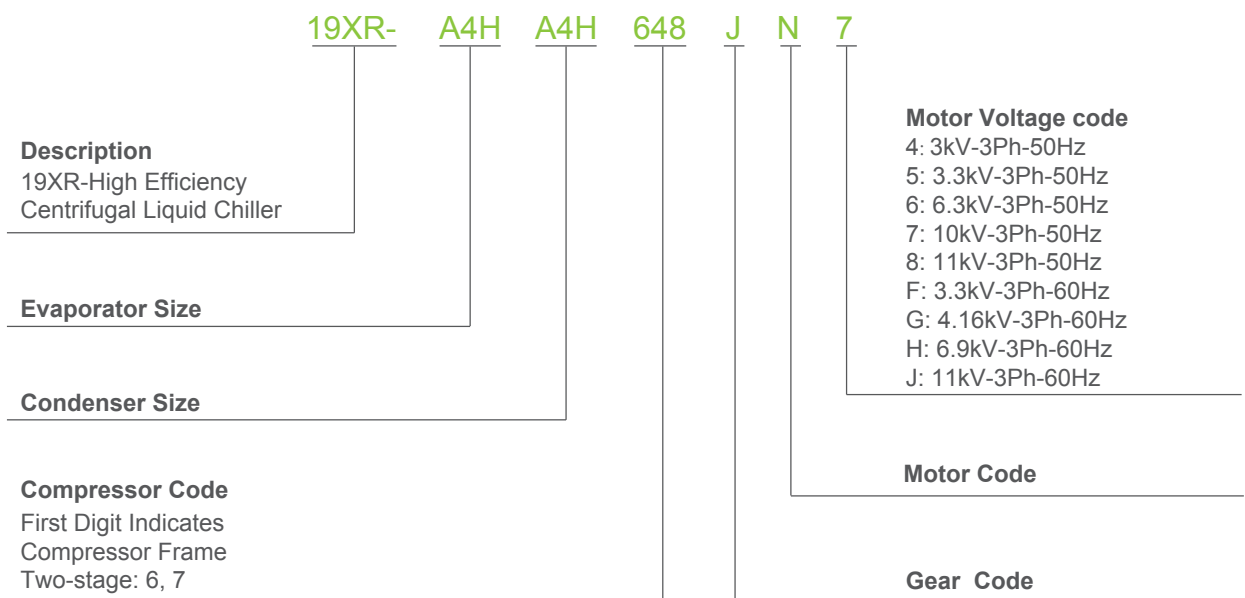

Model Number Nomenclature

19XR/XR-C/E

19XR-6/7

Energy-saving and High Efficiency

- Key components of compressor are designed with advanced aircraft engine technologies.
- Taper pipe diffuser is applied in single stage compressor to improve compressor efficiency. Carrier patent of split rotational diffuser inner ring can rotate with load change, adjust area and direction of flow channel, thus greatly improve the part load performance and reliability of chiller.
- Non-blade diffuser designed for two-stage compressor, combined with inner-stage economizer improves chiller performance and makes it a better choice of high lift application.
- High performance tubing - Tubing with internally and externally enhanced fins improves chiller performance by reducing overall resistance to heat transfer. The new heat exchanger reduces refrigerant charge and manufacturing cost.
- Carrier patent AccuMeter™ system regulates refrigerant flow according to load conditions, provides a liquid seal at all operating conditions and eliminates unintentional hot gas bypass. Thus ensure the part load performance of chiller. (Only for single stage compressor)

Stable Operation

- Variable inlet guide vanes - The guide vanes are connected with air-water piping, reducing installation craft-quality cable and controlled by a precise electronic actuator. The vanes regulate inlet flow to provide high efficiency through a wide operating range.
- Diffuser design - Pipe diffuser design uses jet engine technology, increasing centrifugal compressor peak efficiency (single-stage only). Two-stage compressor utilizes vaneless diffuser to meet high lift application requirement with stable operation.
- Semi-hermetic Motors - Cooling is accomplished by spraying liquid refrigerant on the motor windings. This highly efficient motor cooling method also eliminates the potential for shaft seal leaks and refrigerant/oil loss.

Environmental Leadership

- Designed specifically for chlorine-free HFC-134a refrigerant (the environmentally preferred HFC-134a refrigerant with zero ozone depletion potential)

- 19XR/XR(V) AquaEdge chiller provides a complete line of compressors, motors and heat exchangers, ensuring the best combination of chiller components regardless of tonnage, lift, and efficiency specifications.
- Carrier offers multiple starters choices for different power supply application.
- 19XR(V) AquaEdge chiller can be equipped with high tier LF2 VFD which with Active Rectifier, the harmonic distortion (THD) $\leq 5\%$, fully comply IEEE519-1992 requirement, also the fundamental power factor can be up to 0.99. With the help of VFD, the IPLV.IP of 19XR(V) can achieve to 11.0.
- Colorful Touch Screen - friendly human machine interface , graphical display screens for the main components and support multi languages.

Free-standing VFD starter

Unit-mounted VFD starter

Convenient Installation

- Water boxes are equipped with standard flanges, which provides the ease of field piping.
- Positive pressure design can save valuable mechanical room space with reducing 35% chiller size compared with low pressure design. In addition, it eliminates the need for purge system to save the cost for customer.
- Refrigerant-cooled oil cooler, no need for field water piping, reduce installation cost.
- Cooler and condenser are designed and manufactured in accordance with relevant GB code.
- The unit isolation valves facilitate the condenser as a liquid container during the transition season, which provides ease of maintenance.

Carrier SmartView™ Intelligent Control System

User-friendly Interface

Carrier centrifugal chiller equips the latest SmartView™ control system with strong control and monitoring function during chiller operation. The SmartView™ control system applies a 10 inch colorful touch screen, which can support up to ten language choices for customer, real time display of operation parameters with pictures makes it more human friendly and comfortable interface for operation. SmartView™ intelligent control system simulates and monitors chiller operation, adjusts cooling or heating capacity according to load change and provides various protection during operation.

Smart Operation

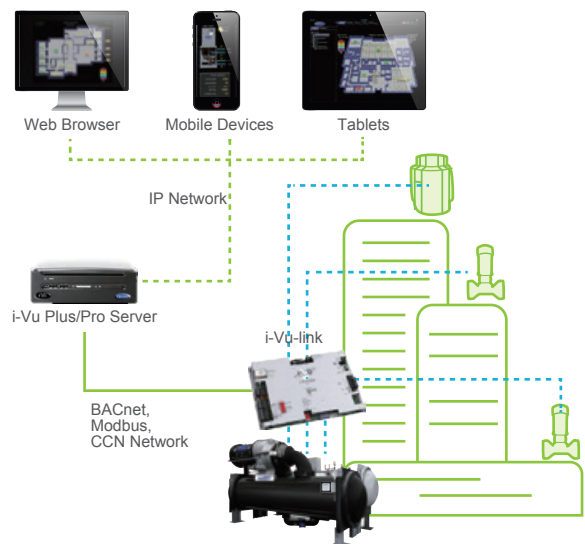

- SmartView™ control system provides smart password function to avoid any setting change without authorization.
- When chiller receives start-up order, controller will conduct following pre-start safety checking, to ensure parameters like oil sump temperature, condensing pressure, bearing temperature, motor winding temperature, discharge temperature, evaporator saturated temperature and average line voltage etc. are normal.
- During chiller operation, except for the function of monitoring main operation parameters control system also has capability to record and display trend curve, which is real time trend of key components during operation. It ensures effective and reliable operation of chiller by optimized intelligent and dynamic control algorithm.
- SmartView™ control system has comprehensive protection during operation, such as oil sump temperature control, surge protection, overvoltage and overcurrent protection, discharge temperature overheat protection, bearing temperature overheat protection, evaporator and condenser anti-freeze protection, low discharge superheat protection etc. in order to ensure chiller long time reliable operation.
- The optional Envelope Stability Control is an advanced solution to balance the chiller efficiency and reliability at very low load. The controller optimizes compressor speed, inlet guide vane position and stabilizer valve position to find the most efficient operating point throughout the operating range without compromising the chiller stability in real time.

Intelligent Diagnosis

- SmartView™ control system has failure diagnostic function™ and can be easily accessed via touch screen for detail chiller operation parameters. If control system detects failure the alarm will be initiated and related code will be recorded in alarm menu. The alarm records can be automatically saved by control system. Carrier service technician can read and delete alarm records by Carrier service tools.
- SmartView™ control system has additional pre-diagnostic function. Different with diagnostic function, information displayed from this function is mainly for maintenance purpose. For an example, to inform customer periodically replace lubricant and filter from this function.
- SmartView™ control system has email alarm function. If the controller has been connected to internet, the control system can automatically send out an email with one or more alarm information to customer or service people through effective email address when alarm occurs.

Flexible Interface and Easy Connection with Building Automation System

- SmartView™ control panel supports BACnet or Modbus protocol, with which chiller can seamlessly connect with the Building Automation System or the i-Vu®/WebCTRL control network.
- With the powerful i-Vu® Link (optional), user can integrate all plant equipment into i-Vu® Building Automation System. The i-Vu® Building Automation System provides everything user needs to access, manage, and control your building, including the powerful i-Vu® user interface, plug-and-play BACnet or Modbus controllers and state-of-the-art Carrier equipment.
- Carrier provides WebCTRL as an additional option to provide similar function like i-Vu® Link. If you have any questions, please contact with Carrier local agents.

The i-Vu Building Automation System

Smart Chiller

Using wireless cellular communications technologies, Carrier SMART Service continuously streams operating data to the cloud in real time directly from your chiller's SmartView™ controller. The data is then captured within our IoT platform for ongoing insight into your chiller's health.

Features:

- ✔ Integrated equipment sensors that capture key operating data
- ✔ Secure wireless connectivity to Carrier's cloud-based IoT platform
- ✔ Persistent and reliable data transmission

Smart Cloud

Carrier SMART Service continuously stores and assesses equipment operating data and service history, comparing it to established values for analytics and data validation. It compares this data to design specifications and matches it against allowable ranges, allowing Carrier to deliver pre-emptive service solutions as needed.

An added benefit, by phases and ultimately, all Carrier service agreement customers will have access to the Carrier SMART Service system.

Features:

- ✔ Complete visibility into your system's performance, energy usage and service history
- ✔ Advanced diagnostics and analytics providing actionable insights

Smart Technician

Carrier SMART Service changes how equipment is serviced and maintained. Carrier service technicians now utilize mobile devices with remote access to put real-time chiller data and service history in the palm of their hands. With advance notification of problems, technicians arrive at the jobsite more informed, which leads to faster problem resolution and reduced mean time to repair.

Features:

- ✔ Advance notification
- ✔ Remote detection and diagnosis

19XR Two-stage Centrifugal Chiller

In 2013, Carrier introduced a high-efficiency two-stage centrifugal chiller to deliver continuous energy saving and environmental protection, as well as the most comprehensive range of air-conditioning, heat pump, energy recovery, ice thermal storage, VFD and high-voltage applications.

Environmental Leadership

The system has been designed specifically for chlorine-free HFC-134a refrigerant, the environmentally preferred HFC-134a refrigerant with zero ozone depletion potential.

Industry-leading Efficiency

19XR chillers can achieve up to 6.6 full load COP_R and 7.5 IPLV.IP (without VFD) or 11.0 IPLV.IP (with VFD) at AHRI conditions.

- Advanced high efficiency two-stage compressor, design specifically for HFC-134a.
- New blunt leading-edge IGV for part load efficiency improvement.
- An interstage economizer improves system efficiency and increases capacity.

Wide Application

The innovative two-stage compressor provides a dramatic range of capabilities. With a maximum LWT of 65°C and a minimum LCWT of -6°C, the 19XR two-stage centrifugal chiller is ideal wherever energy conservation and environmental protection are required.

Stable Operation

The two-stage compressor has excellent load-adjustment capabilities to achieve high efficiency and stability at a variety of load and temperature conditions, including its minimum load of 10%.

The 19XR two-stage centrifugal chiller also features a refrigerant cooled semi-hermetic low current inrush motor, eliminating the need for shaft seal and oil refrigerant containment components.

Double-grooved tube sheets make a superior leak-tight joint when combined with roller expansion.

Low Sound Level

For ultra-quiet operation, the advanced two-stage compressor has an optimized aero-structural design and allows lower impeller speed.

Modular Construction

The cooler, condenser and compressor assemblies are compact and entirely bolted together. This design makes the chiller ideally suited for replacement projects where ease of disassembly and reassembly at the jobsite is essential.

Series Counter Flow Application

Carrier 19XR centrifugal chillers fully support system application of Series Counter Flow with cooling capacity of each system up to 6000 Tons.

Better System Efficiency

- Improved full load efficiency by reducing the lift of each circuit cycle.
- Optimized part load operation to achieve better system efficiency at duties less than 50%.

Better Reliability and Redundancy

- Two independent refrigeration circuits and either compressor can be configured as lead.
- Two compressors start-up orderly to reduce system inrush current.
- Two compressors operate in turn to balance operation time and enlarge service interval.

Advanced System Control (Standard in SmartView™)

- Optimized load balance by recalculating upstream chiller control point.
- Optimized surge control by synchronizing surge condition of both lead and lag chiller.
- Optimized lead/lag communications.

Two chiller modules of SCF system may be arranged in side-by-side or series depending on chiller plant layout. Details please contact Carrier local agencies.

Heat Pump Application

The heat pump system utilizes natural energy storage in soil, bedrock, groundwater, surface water, wastewater and air to satisfy demand for building cooling, heating and hot water.

Heat Pump System Benefits

- ✓ Cooling/heating
- ✓ Improved system efficiency
- ✓ Use of low-grade energy

19XR-E Benefits

- ✓ Wide range of applications with high efficiency
- ✓ Hot water temperature (LWT) up to 65°C

Geothermal

Underground water

Earth's surface water

Dark/Grey water

Energy Recovery Application

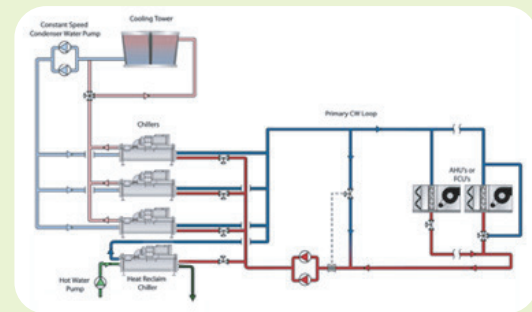

Discharging condenser heat via a cooling tower not only causes thermal pollution but also brings tremendous energy waste to the applications such as hotel, factory and hospital.

Energy Recovery System Benefits

- ✓ Reduced boiler size and operating time
- ✓ Reduced cooling tower size and waste heat discharge
- ✓ Improved system efficiency by 15-25%

19XR-E Benefits

- ✓ High efficiency operation
- ✓ Hot water temperature(LWT) up to 65°C

Ice Thermal Storage Application

The chiller stores energy as ice during night, when electricity costs and utilization are low. The energy is discharged to meet cooling loads during day time when the electricity price is high, greatly reducing building operating costs.

Ice Thermal Storage System Benefits

- ✓ Reduced chiller and cooling tower size
- ✓ Reduced chiller operating time
- ✓ Operational cost savings by using off-peak electricity
- ✓ Backup cooling in emergency situations

19XR-E Benefits

- ✓ Stable 24-hour operation
- ✓ Suitable for variable voltage and VFD applications
- ✓ Minimum leaving water temp (LCWT): -6°C
- ✓ Suitable for cold air distribution district cooling systems

- Note:** 1. The above selections are based on entering/leaving chilled water temperature:12/7°C; entering/leaving cooling water temperature:32/37°C. Cooler fouling factor is 0.0176 m²C/kW and condenser fouling factor is 0.044 m²C/kW.
2. The above heating application selections are based on entering/leaving chilled water temperature 10/5°C; entering/leaving cooling water temperature 40/45°C. Cooler fouling factor is 0.0176 m²C/kW and condenser fouling factor is 0.044 m²C/kW.
3. Carrier will select specific models using computer on different requests for tonnage, lift, and efficiency. For details, please contact local agencies.
4. Standard water box pressure is 1.0MPa, and can provide 1.6MPa, 2.0MPa as option; For more requirements, please contact local agencies.
5. The above selections are made based on the voltage being 10kV. For details or customized selections, please contact local agencies.
6. 60Hz selections are also available. Please contact local agencies to get more support.

Notes: 1. A-length includes flanges with both cooler and condenser having two passes and nozzles being at the same end (drive end for standard units).
2. The above dimensions are based on the waterside pressure being 1.0Mpa. A-length will vary while the waterside pressure increases.

Typical Piping and Wiring (with Free-standing Starter)

Piping and Wiring Requirements:

- The installer must get all pipes and wires in place and mark the ends.
- Filters must be installed in cooling water and chilled water pipes.
- Thermometer (0-50°C) and pressure gauge (0~1MPa or 2MPa) must be installed at inlet and outlet of the pipes.
- The installer must install the relief valve vent to outdoors with a steel pipe(outer diameter 42mm, thickness 4mm).
- It is suggested that an oxygen content monitor be installed in the machine room for safety, which will give an alarm when the oxygen content is less than 19.5%.
- Selected cable size range is from 50~120 square millimeter. If the customer select cable size is less than 50 square millimeter or more than 120 square millimeter, please contact YLC factory.
- Communication cable between starter (ISM module) and control box (IOB module) shall apply Carrier specified one pair and half shielded twisted cable. The cable shall be installed as far away from high voltage cables and other strong jamming equipments as possible and keep the communication cable as shorter as possible to avoid noise. The communication cable must go through a metal conduit independently.

Typical Piping and Wiring (with VFD)

- | | | | |
|------------------------------|------------------------------|----------------------|-----------------------|
| ① Air Switch | ② Unit-mounted Starter | ③ Control Panel | ④ Oil Pump Controller |
| ⑤ Vents | ⑥ Pressure Gauges | ⑦ Chilled Water Pump | ⑧ Cooling Water Pump |
| ⑨ Chilled Water Pump Starter | ⑩ Cooling Water Pump Starter | | |

Line	Purpose	Specification
1#	Main power to Starter:	380V AC: 3 phases and 1 grounding
4#	To Cooling Tower Fan Starter:	2 control lines (optional)
5#	To Cooling Tower Water Pump Starter:	2 control lines (optional)
6#	To Chilled Water Pump Starter:	2 control lines (optional)

Piping and Wiring Requirements:

- The installer must get all pipes and wires in place and mark the ends.
- Filters must be installed in cooling water and chilled water pipes.
- Thermometer (0-50°C) and pressure gauge (0~1MPa or 2MPa) must be installed at inlet and outlet of the pipes.
- The installer must install the relief valve vent to outdoors with a steel pipe(outer diameter 42mm, thickness 4mm).
- It is suggested that an oxygen content monitor be installed in the machine room for safety, which will give an alarm when the oxygen content is less than 19.5%.

Notes:

- Accessory soleplate package includes 4 soleplates, 16 jacking screws, and 16 leveling pads.
- Jacking Screws should be removed after the grout has set.
- Thickness of grout varies, depending on the amount necessary to level chiller.

Field Wiring Specification (with Free-standing Starter)

I. General

- 1.0 Starters shall be designed and manufactured in accordance with Carrier Engineering Requirement Z-415.
- 1.1 All field-supplied conductors, devices, and the field-installation wiring, termination of conductors and devices, must be in compliance with all applicable codes and job specifications.
- 1.2 The routing of field-installed conduit and conductors and the location of field-installed devices must not interfere with equipment access or the reading, adjusting, or servicing of any component.
- 1.3 Equipment installation and all starting and control devices, must comply with details in equipment submittal drawings and literature.
- 1.4 Contacts and switches are shown in the position they would with the circuit deenergized and the chiller shut down.
- 1.5 WARNING - Do not use aluminum conductors.
- 1.6 Installer is responsible for any damage caused by improper wiring between starter and machine.

II. Power Wiring to Starter

- 2.0 Circuit breaker is to be used to disconnect power to starter.
- 2.1 Lug adapters may be required if installation conditions dictate that conductors be sized beyond the minimum ampacity required.
- 2.2 Compressor motor and controls must be grounded by using equipment grounding lug provided inside starter enclosure.

III. Control Wiring

- 3.0 Field supplied control conductors should be at least 0.75mm² or larger.
- 3.1 Optional ice build start/remote lockout contacts, optional remote start/stop device contacts, optional fire alarm interlock and optional spare safety device contacts, must have 24 VAC rating. MAX current is 60 MA, nominal current is 10 MA. Switches with gold plated bifurcated contacts are recommended. (Not apply to SmartView™ control products. For SmartView™ control products, shall wire from control panel.)
- 3.2 Remove jumper wire between J2-1 and J2-2 before connecting auxiliary safeties between these terminals. (Not apply to SmartView™ control products. For SmartView™ control products, shall wire from control panel.)
- 3.3 Each integrated contact(ISM) output can control loads(VA) for evaporator pump, condenser pump, tower fan low, tow fan high, and alarm annunciator devices rated 5 amps at 115VAC and up to 3 amps at 277VAC. Do not use starter control transformer as the power source for contactor coil loads. (For SmartView™ control products, these relay outputs can also wire from control panel but rated 1 amp at 24VAC.)
- 3.4 Do not route control wiring carrying 30V or less within a conduit which has wires carrying 50V or higher or along side wires carrying 50V or higher.
- 3.5 Control wiring between free-standing starter and control panel must be separate shielded cables with minimum rating of 600V, 80°C For communication must use shield twist pair wire.
- 3.6 If optional oil pump circuit breaker is not supplied within the starter enclosure as shown, it must be located within sight of the chiller with wiring routed to suit. (Not applicable for 19XR6/7)

Field Wiring Specification (with Free-standing Starter)

IV. Power Wiring Between Free-standing Starter and Compressor Motor

- 4.0 Low voltage (600 v or less) compressor motors have (6) 5/8" terminal studs (lead connectors not supplied by Carrier). Either 3 or 6 conductors must be run between compressor motor and starter, depending on the type of motor starter employed. If only 3 leads are utilized, jumper motor terminals as follows : 1 to 6, 2 to 4, and 3 to 5. Center to center distance between terminals is 8mm. Compressor motor starter must have nameplate stamped as to conform with Carrier Engineering Requirement Z-415.
- 4.1 Medium voltage [over 600 volts] compressor motors have (3) terminals. Connections are 9/16-threaded stud. Compressor motor starter must have nameplate stamped as to conform with Carrier Engineering requirement "Z-415."
- 4.2 Power conductor rating must meet minimum unit nameplate voltage and compressor motor RLA. When (3) conductors are used: Minimum ampacity per conductor = $1.25 \times$ compressor RLA. When (6) conductors are used: Minimum ampacity per conductor = $0.721 \times$ compressor RLA.
- 4.3 When more than one conduit is used to run conductors from starter to compressor motor terminal box, three leads from each phase (conductor) must be in each conduit to prevent excessive heating (e.g., conductors to motor terminals 1, 2, & 3 in one conduit, and those to 4, 5, & 6 in another).
- 4.4 Compressor motor power conductors may enter terminal box through top, bottom or right side using holes cut by contractor to suit conduit. Flexible conduit should be used for the last few feet to the terminal box for unit vibration isolation.
- 4.5 Compressor motor frame should be grounded in accordance with the National Electrical Code-us (NFPA-70) and applicable codes. Means for grounding compressor motor is a #4 AWG-500 MCM pressure connector, supplied and located in the lower left side corner of the compressor motor terminal box.
- 4.6 Do not allow motor terminals to support weight of wire cables. Use cable supports and strain relieves as required.
- 4.7 Use backup wrench when tightening lead connectors to motor terminal studs.
- 4.8 Motor terminals and wire connectors must be insulated with insulation putties and tapes attached to chillers to prevent moisture condensing and electrical arc.

Field Wiring Specification (with Unit-mounted VFD)

I. General

- 1.0 VFD starters shall be designed and manufactured in accordance with Carrier Engineering Requirement Z-420.
- 1.1 All field-supplied conductors, devices, and the field-installation wiring, termination of conductors and devices, must be in compliance with all applicable codes and job specifications.
- 1.2 The routing of field-installed conduit and conductors and the location of field-installed devices must not interfere with equipment access or the reading, adjusting, or servicing of any component.
- 1.3 Equipment installation and all starting and control devices, must comply with details in equipment submittal drawings and literature.
- 1.4 Contacts and switches are shown in the position they would with the circuit deenergized and the chiller shut down.
- 1.5 **WARNING** - Do not use aluminum conductors.

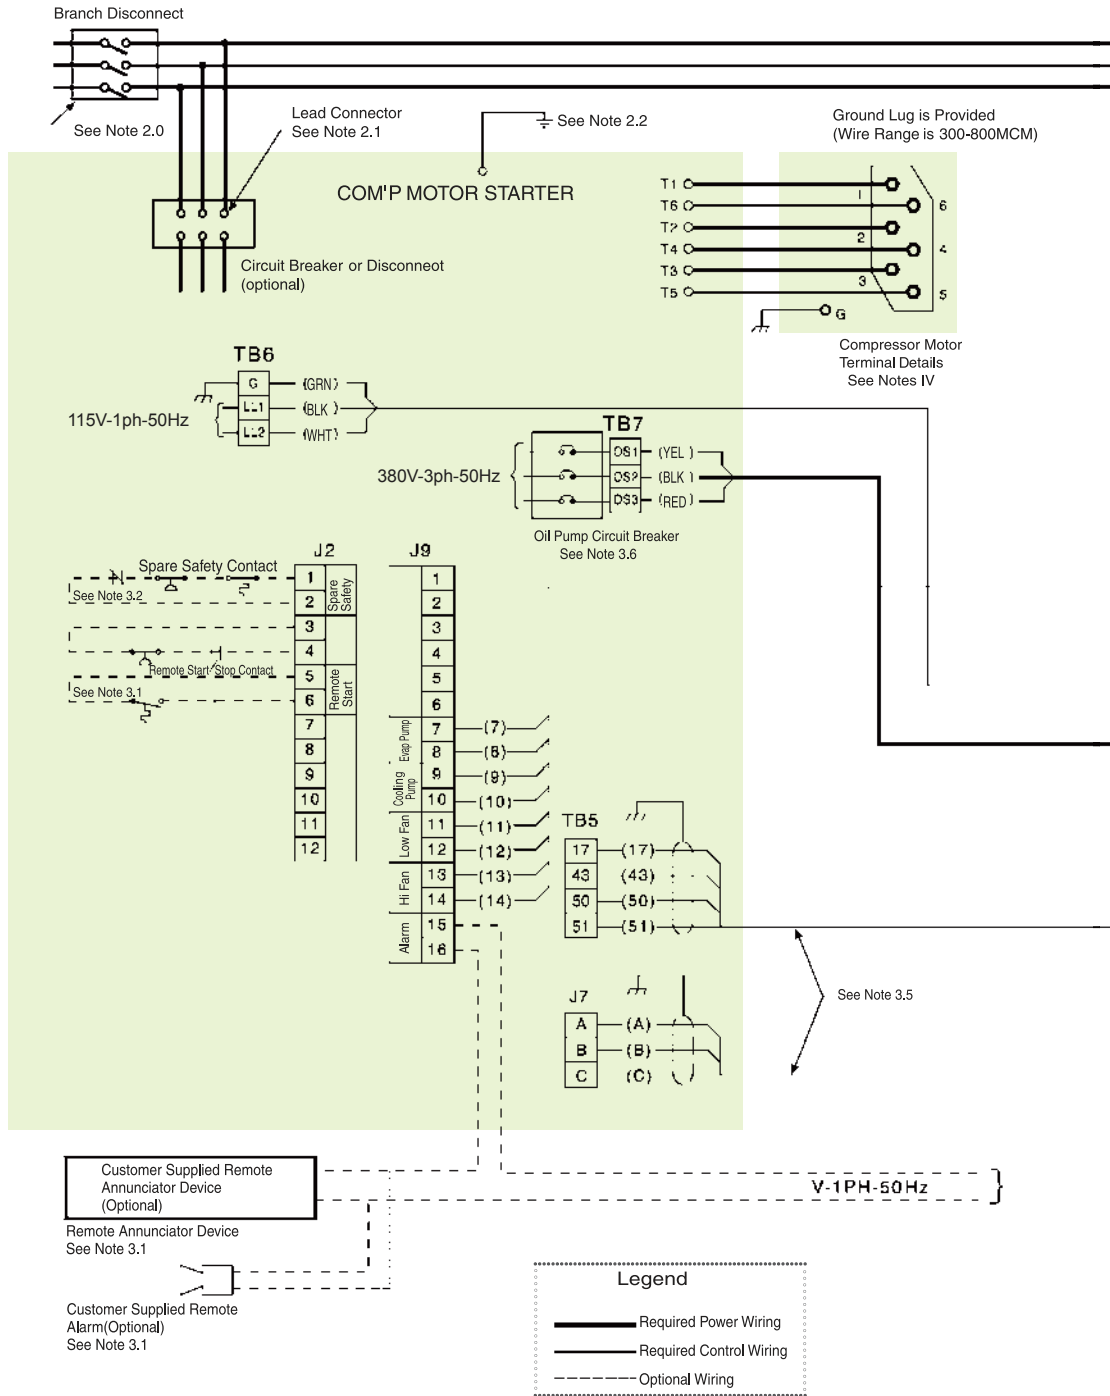

II. Power Wiring to VFD Starter

- 2.0 Provide a means of disconnecting power to starter. Fused disconnect is required on VFD.
- 2.1 Incoming power wire must be protected with metal jacket.
- 2.2 Line side power conductor rating must meet VFD nameplate voltage and chiller full load amps (minimum circuit ampacity).
- 2.3 Compressor motor and controls must be grounded by using equipment grounding lugs provided inside unit mounted starter enclosure.

III. Control Wiring

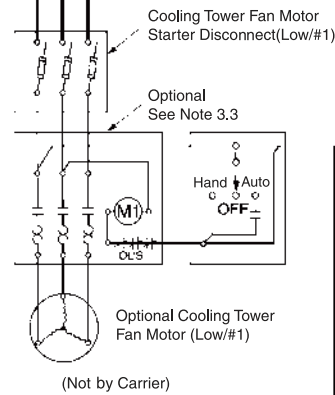

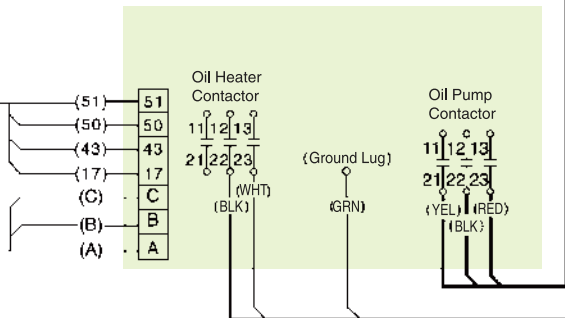

- 3.0 Field supplied control conductors should be at least 0.75 mm² or larger.
- 3.1 Optional ice build start/terminate device contacts, optional remote start/stop device contacts and optional spare safety device contacts, must have 24 VAC rating. MAX current is 60 MA, nominal current is 10 MA. Switches with gold plated bifurcated contacts are recommended. (Not apply to SmartView™ control products. For SmartView™ control products, shall wire from control panel.)
- 3.2 Remove jumper wire between TB1-19 and TB1-20 before connecting auxiliary safeties between these terminals. (Not apply to SmartView™ control products. For SmartView™ control products, shall wire from control panel.)
- 3.3 VFD contact outputs can control cooler and condenser pump and tower fan motor contactor coil loads (VA) rated 5 Amps at 115 VAC up to 3 Amps at 250 VAC. Do not use VFD starter control transformer as the power source for contactor coil loads. (For SmartView™ control products, these relay outputs can also wire from control panel but rated 1 amp at 24VAC.)
- 3.4 Do not route control wiring carrying 30V or less within a conduit which has wires carrying 50V or higher or along side wires carrying 50V or higher.
- 3.5 VFD provide spare output terminal for customer, Input sign must be 4~20mA, not grounded. Input resistance of terminal is soon. (Not apply to SmartView™ control products. For SmartView™ control products, shall wire from control panel.)

19XR/XR-C/E Typical Field Wiring with Free-Standing Starter (Low Voltage)

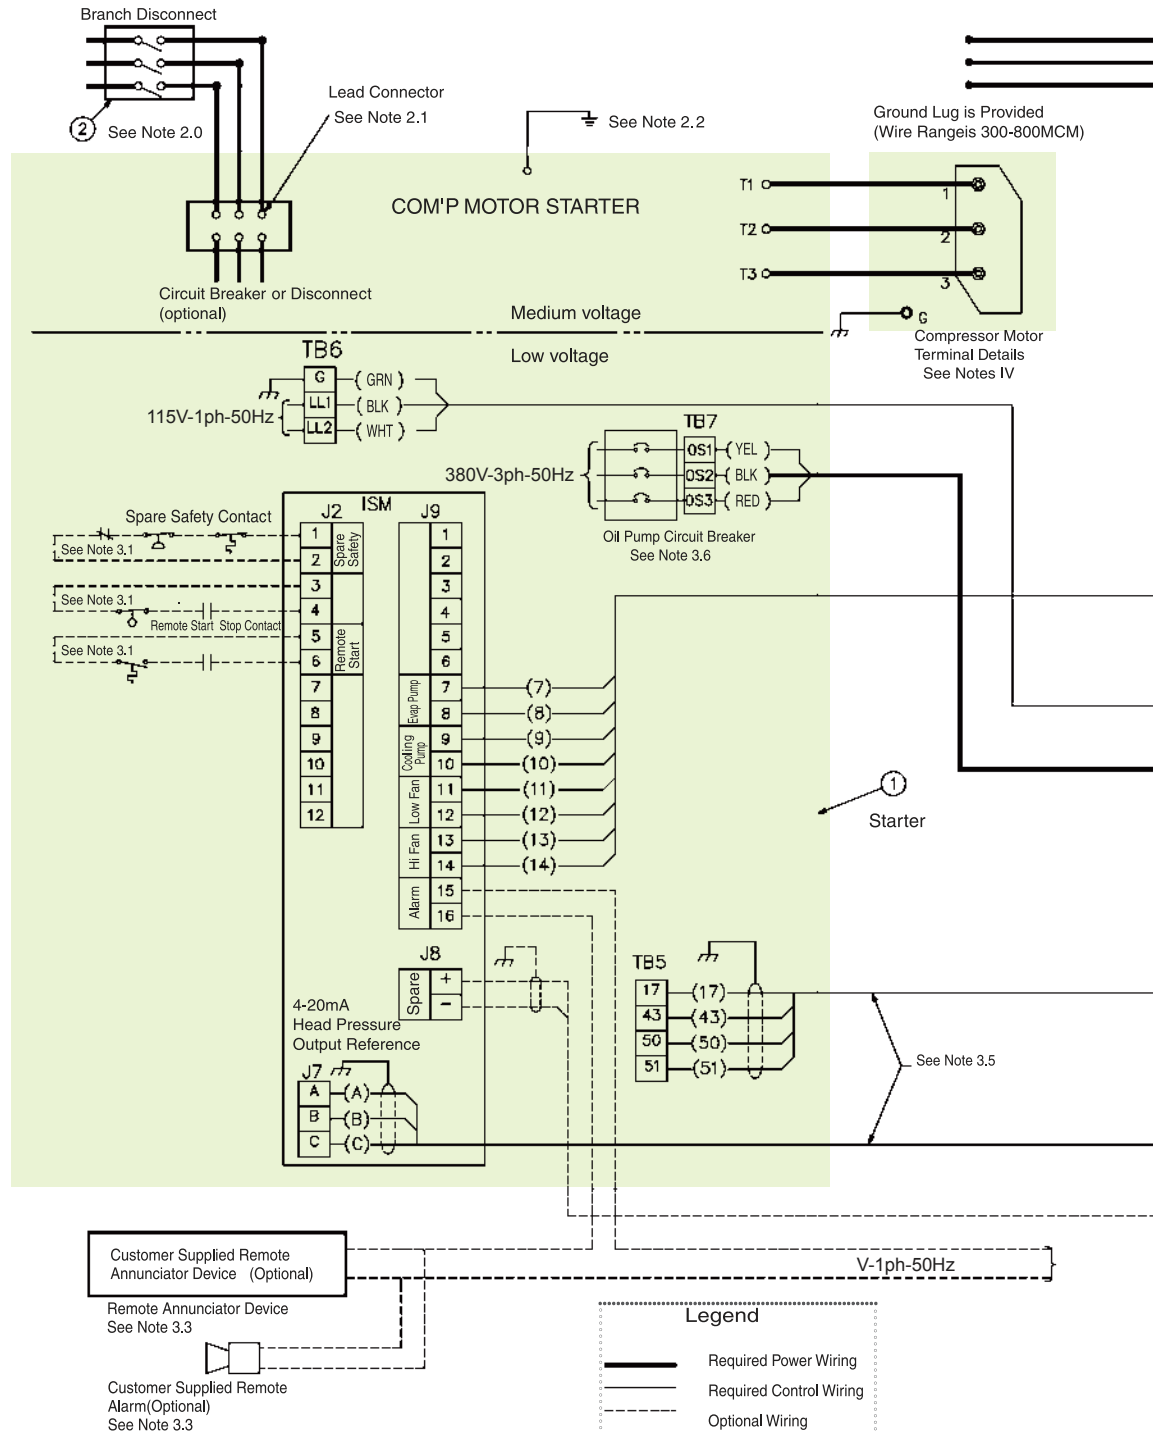

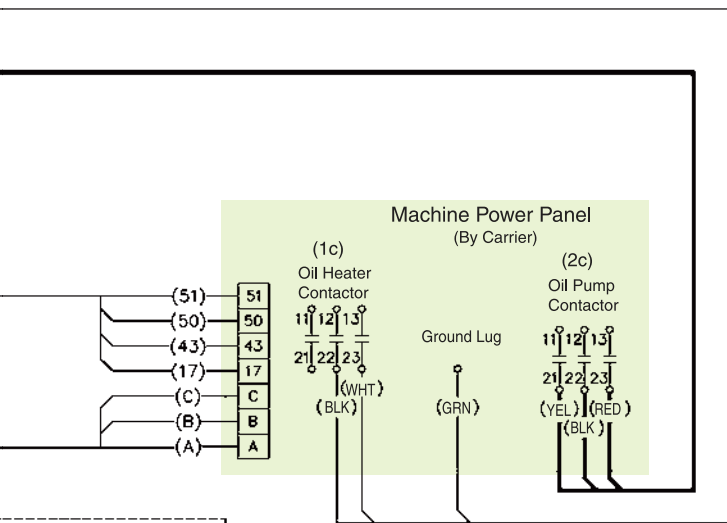

Lubrication System Power Panel (by Carrier)

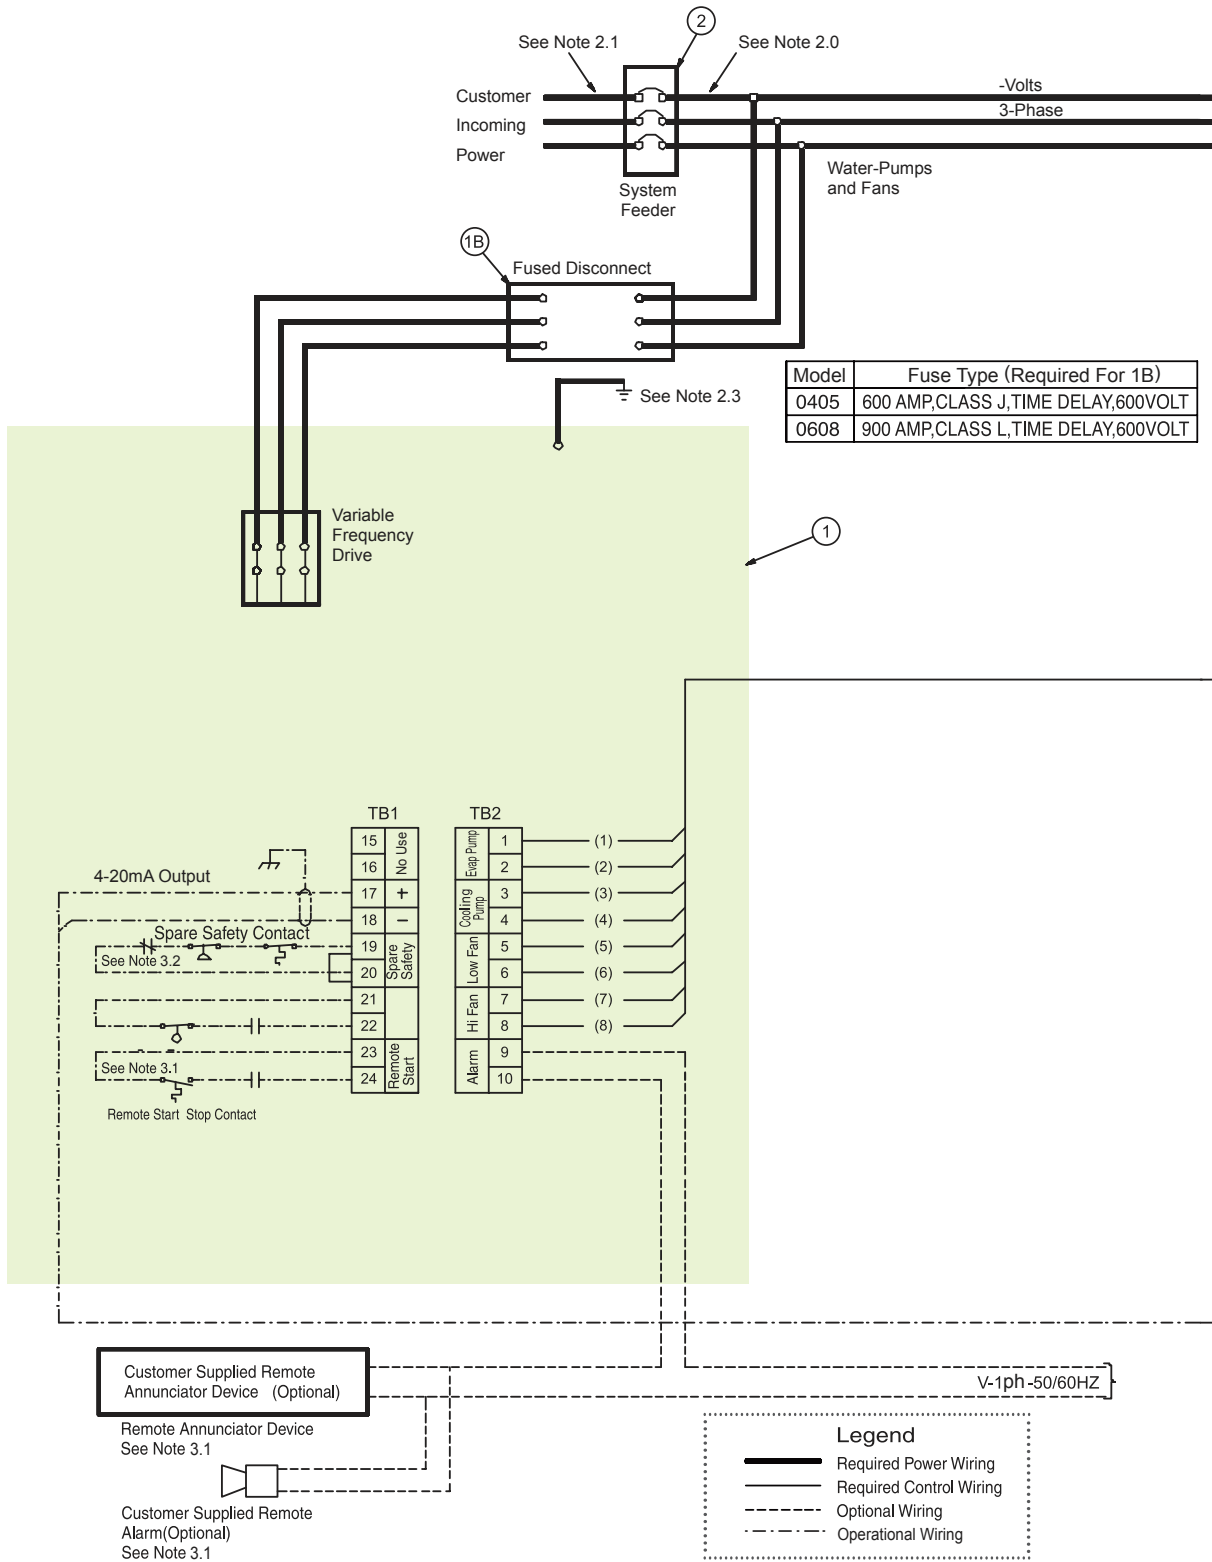

19XR/XR-C/E Typical Field Wiring with Free-Standing Starter (Medium/High Voltage)

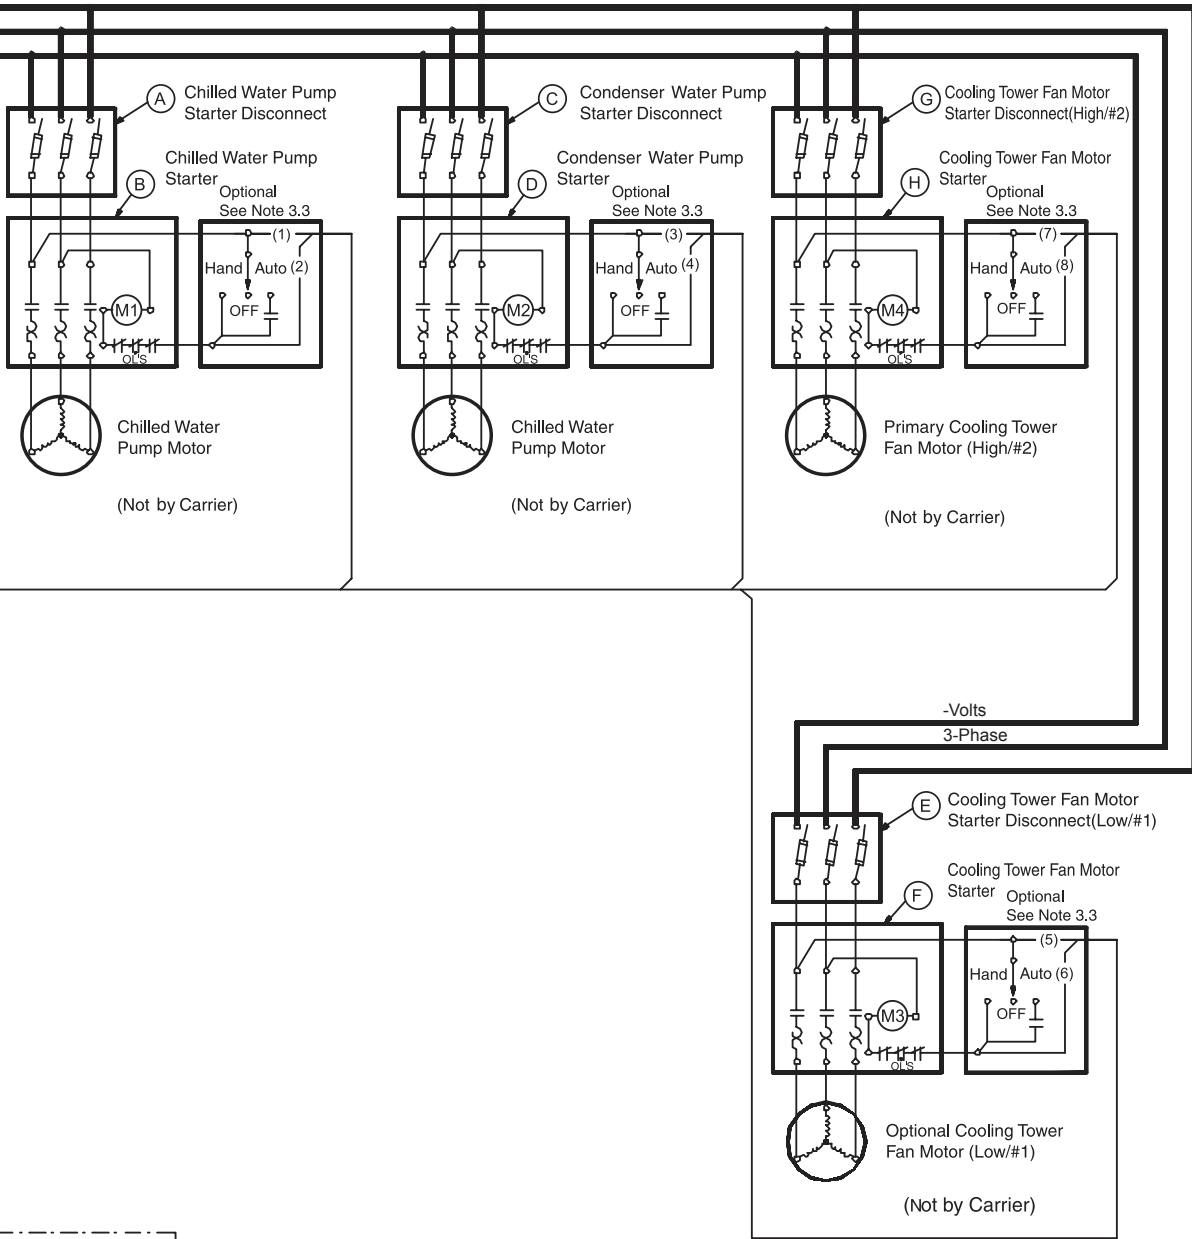

4-20mA Output Reference to Device Choice (Not by Carrier)
Examples: Tower Bypass Value
Tower Speed Control
Condenser Pump Speed Control

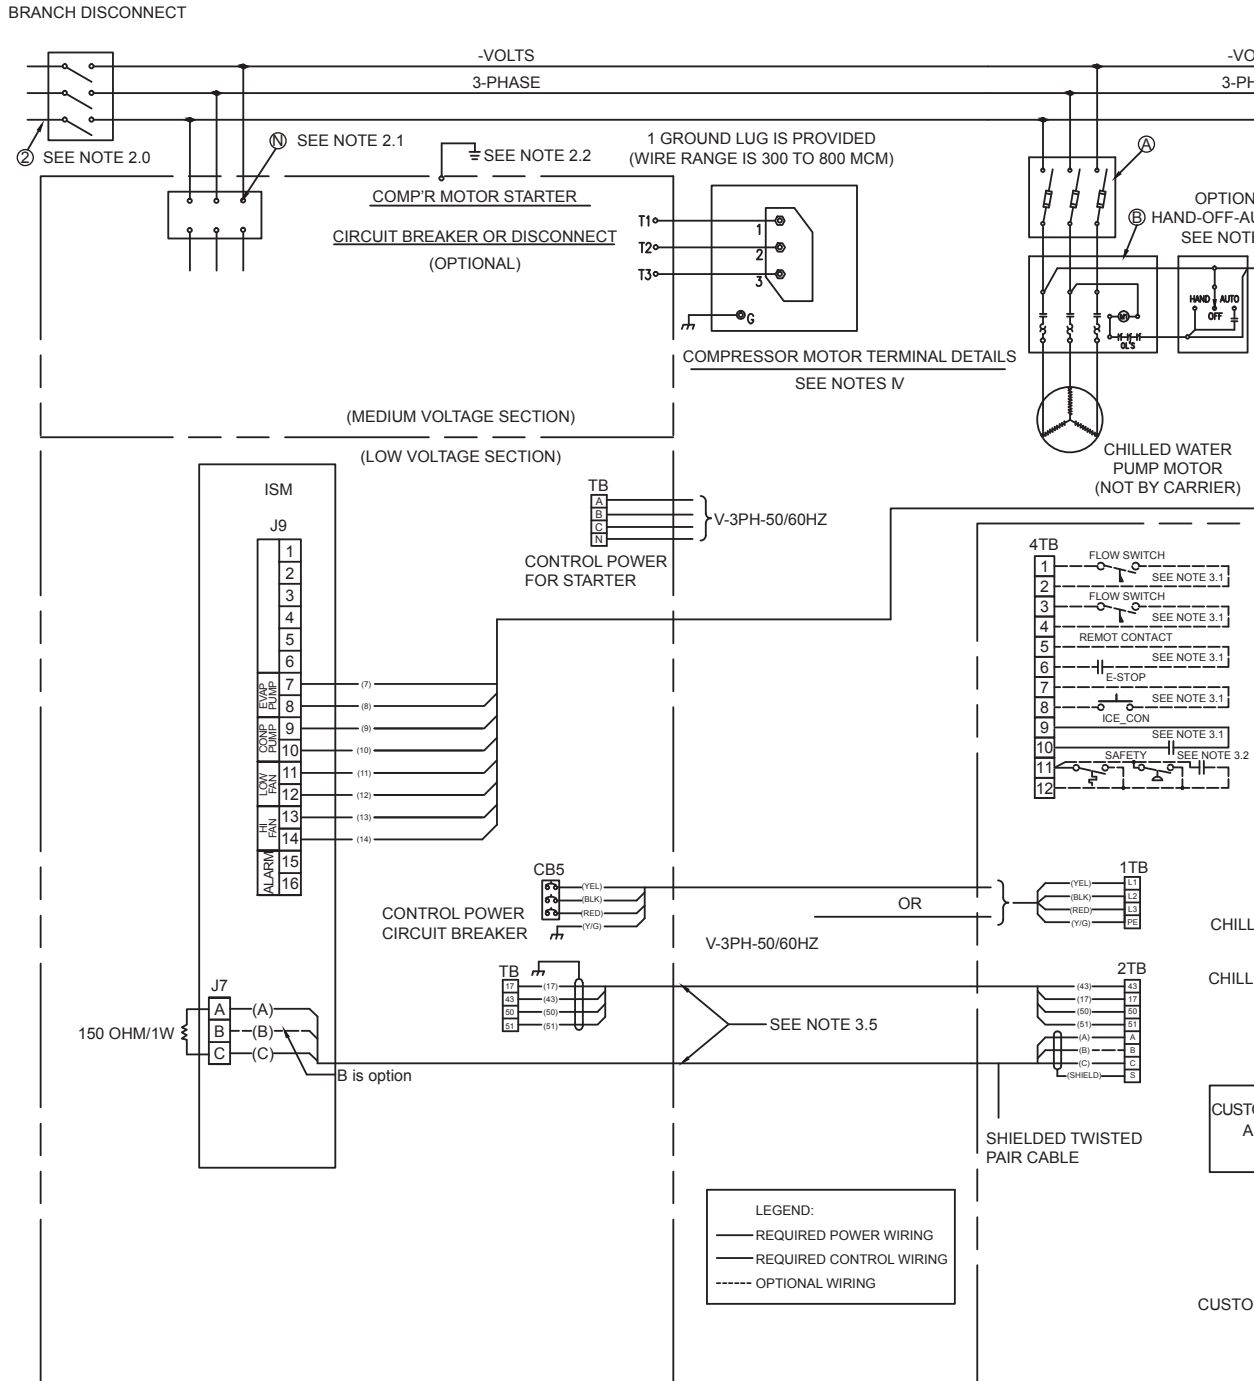

19XRV/XRV-C/E Typical Field Wiring with UM-VFD

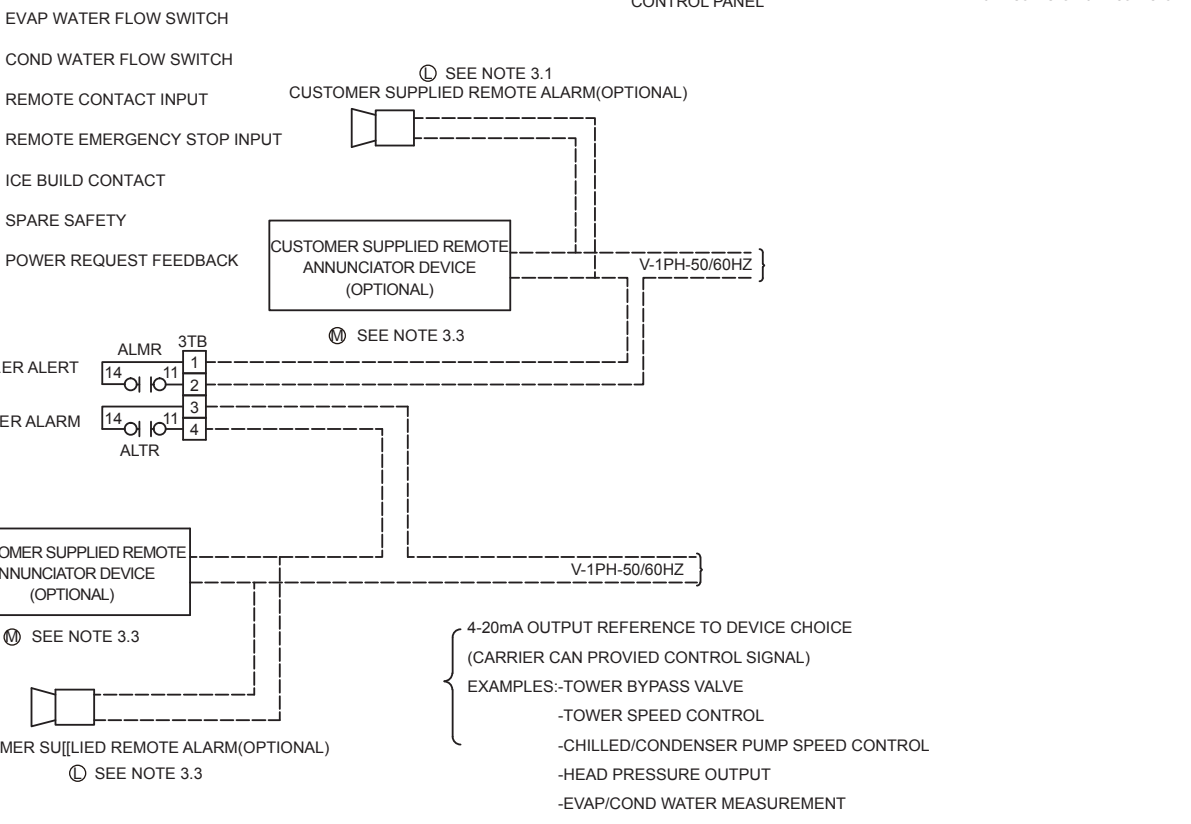

4-20mA Output Reference to Device Choice (Not by Carrier)
 Examples: Tower Bypass Valve
 Tower Speed Control
 Condenser Pump Speed Control
 See Note 3.5

19XR-6/7 Typical Field Wiring with Free-Standing Starter (Medium/High Voltage)

Carrier improves the world around us; Carrier improves people's lives; our products and services improve building performance; our culture of improvement will not allow us to rest when it comes to the environment.
